S1 - Benchmark comparison

Haytam CHARAFI | 2303060049 | Prepared 10 November 2026

Coacheey and Eversports: public sports discovery

Eversports offers public sports-class discovery, including fitness listings for Luxembourg, making it comparable to Coacheey's event-discovery task. It is larger and more studio/class-focused; the comparison is not between identical businesses. A1 used the Luxembourg listing; A6, A7, B6 and B7 used the Eversports homepage. The invented path was tested separately. No account, booking or payment action was included.

Provenance and conditions

The observations and screenshots were supplied by the student; AI assisted interpretation, structure and this draft. Coacheey and Eversports were examined in separate sessions. Browser version and most capture times were not recorded. The Eversports missing-page capture uses 3G with caching disabled. Both Lighthouse exports use desktop formFactor, screen emulation disabled and Accessibility only; exact viewport/session conditions are not controlled. The Eversports audit timestamp is 2026-11-09 22:25:01.133 UTC (10 November at 00:25:01 Europe/Bucharest).

Check	Coacheey	Eversports	Meaning
A1 - HTTPS	Student reports HTTP ends at HTTPS; certificate valid. A1-redirect / A1-certificate.	Same redirect reported; secure connection and valid certificate shown. S1-A1-eversports-certificate.	Both provide secure transport in these observations; no overall security ranking follows.
A4 - Missing page	Fresh response 200 with visible 404, friendly message and home link. A4-status-fresh.	GET https://www.eversports.fr/no-such-page-123 returns 404 with Chrome error screen and Reload. S1-A4 status/page.	Eversports has correct status; Coacheey has better on-page recovery. Combine these strengths.
A6 - Rendering	Main text already in source; source/live hero wording differs. A6-source / A6-elements.	Main heading and paragraph present in source; live h1 matches. S1-A6 source/elements.	Both deliver substantive initial HTML. Neither pair distinguishes runtime SSR from static prerendering; Coacheey shows browser modification.

Evidence filenames in the table are abbreviated; full paths and exact pages are in the Core report appendix and stretch/benchmark-notes.md. Each screenshot remains in evidence/.

S1 - Accessibility and discovery

Check	Coacheey	Eversports	Meaning
A7 - Metadata	Descriptive title/description; homepage canonical; lang en; one h1 captured. A7-source-metadata / A7-h1-count.	Title: Eversports - France - Your click to sport. Description explains France-wide discovery; student reports canonical https://www.eversports.fr, lang en, eight h1 elements. S1-A7 description/title.	Both metadata sets describe their pages. Eversports h1 count is student-reported, not captured; multiple h1 elements alone do not establish a defect. sponsored/ugc relevance was not checked on Eversports.
B6 - Keyboard	Header task succeeds with visible focus and no trap. Sport shortcuts skipped by Tab; mouse Yoga opens results. Student B6 notes.	Student confirms Yoga reachable with Tab, visible focus, Enter opens results, no trap encountered. Benchmark notes.	Eversports demonstrates a keyboard-operable sport shortcut for this task. Neither task proves complete keyboard accessibility.
B7 - Lighthouse	Homepage 94; Events 93. Contrast and missing main landmark on both; heading-order flag on Events. B7 HTML exports.	Homepage 100; S1-B7-eversports-home.html. Export still has failed label-content-name-mismatch audit and IndexedDB warning.	100 is not a guarantee of accessibility. Differences are descriptive, not causal: pages, viewport and sessions differ. Warning concerns stored data/loading performance.

What Coacheey could learn

1. Preserve the friendly missing-page message and home link, but return HTTP 404 as Eversports does.

2. Make the sport shortcuts reachable and operable with the keyboard, following the task behaviour observed on Eversports.

3. Investigate the contrast and landmark flags in Coacheey's own audit, using Eversports' stronger recorded score as a comparison rather than treating any score of 100 as proof of full accessibility.

Review limits

Six checks have student observations, but some supporting metadata and timings remain unrecorded. A7 reported values need verification; rel attributes were not assessed. This AI-assisted comparison must be reviewed and rewritten by the student before submission.
