S2 - One-participant usability notes

Haytam CHARAFI | 2303060049 | Prepared 10 November 2026

Participant and procedure

P1 is the student's friend, confirmed not to be a computing student. The reported session date is 6 November 2026, using a laptop; browser, exact time and timezone were not recorded. The student reports about ten minutes of browsing. Consent, think-aloud procedure and non-intervention were not documented. The task outcomes below were supplied retrospectively; whether they belong to that initial session or a later follow-up has not been confirmed.

Reported task	Reported outcome	Time / hesitation
Identify a Pilates event location and price	Kirchberg; EUR15.	Not recorded / not recorded
Identify a coach, sports and rating	MEC MOVEMENT; Yoga and Pilates; student initially reported 0 stars. Later profile evidence displays 0 (0): no displayed reviews, not evidence of an actual zero-star review.	Not recorded / not recorded
Search zzzqqq, then recover	No events found. Student confirms P1 returned to an event list.	Not recorded / not recorded

Follow-up feedback

The student paraphrased the general reaction as cool, easy to use and understandable. Asked about frustration, the student relayed "the app was working as it should be working"; this is relayed wording, not a contemporaneous transcript. The student confirmed no changes were suggested. No frustration or recommendation is invented.

Connection to Core

Successful recovery after an impossible search is consistent with B2's clear message and advice to adjust the search. Positive general feedback does not contradict B5's missing accessible names or B6's skipped sport shortcuts: assistive-technology use and keyboard-only testing were not documented, and one laptop visitor cannot represent all users.

Limitations and status

This is a partial usability record, not a complete timed S2 study. The missing timings, hesitation observations and documented procedure may affect marks. The student should confirm chronology, retain the original notes, and revise this AI-assisted draft; no retrospective details should be invented.
