Coacheey website field study

Haytam CHARAFI | 2303060049 | SFWE475 / CPRG201

Website: https://coacheey.com/ | Organisation/brand: Coacheey

Prepared: 10 November 2026 | Core audit, with separate Stretch and Challenge material

Recorded Lighthouse audit dates: 9 November UTC; Eversports run falls on 10 November in Europe/Bucharest. Browser recorded by these exports: Chrome 156 on 64-bit Windows. Other capture dates and full browser builds were not recorded.

Scope and method

Coacheey is a platform for finding coaches and booking training sessions. Its public pages also list group events in Luxembourg. This review looks at the steps before booking: searching for a session, reading a coach profile and dealing with empty results or a lost connection. The evidence comes from the student's screenshots, keyboard observations and saved Lighthouse reports. No login, booking, payment or message was submitted. The screenshots use different responsive layouts because DevTools was docked in different positions; exact viewport sizes were not recorded. The findings apply to the pages and states shown.

AI assisted organisation, explanation of the supplied evidence, English, drafting and PDF layout. The student must check this wording against their own work and the course's permitted use of AI. Missing observations have not been filled with invented results. The Challenge code and local checks have separate AI attribution in fix/README.md.

Part A - Technical behaviour

A1 - HTTPS and redirects

The HTTP address was reported to return to HTTPS, and Chrome showed a valid certificate. This means the browser accepted the certificate and the connection was encrypted during that check. The individual redirect steps and certificate dates were not copied into the notes. The evidence therefore supports the final HTTPS address and valid-certificate result; it does not prove that every part of the service is secure. [A1]

A2 - URL structure

All five addresses are lowercase and use no underscores. Most paths give a useful idea of the page, although /auth is less clear to a new visitor than a word such as sign-in. The filtered coach address is difficult to read because the city and sport are long identifiers. It still uses only two query parameters, both related to the search. The Events Lighthouse export confirms HTTPS; the other four screenshots hide the scheme, so that rule stays unconfirmed for those addresses. [A2]

Recorded browser address	HTTPS	Short / readable	Lowercase	Hyphens, not underscores	Few parameters
coacheey.com/public-sessions	Pass: export	Pass	Pass	Pass	Pass: 0
coacheey.com/coaches?city=d3e88837-bff6-444e-8ba8-13906ae37e0b&sport=37644da5-c4da-46f2-883a-84da3c98e1c4	Unknown	Fail: UUIDs	Pass	Pass	Pass: 2
coacheey.com/auth	Unknown	Pass; technical	Pass	Pass	Pass: 0
coacheey.com/coach/bee-mindful-3b6ad569	Unknown	Pass	Pass	Pass	Pass: 0
coacheey.com/for-coaches	Unknown	Pass	Pass	Pass	Pass: 0

Addresses are transcribed as displayed; hidden schemes have not been added as verified observations. The readable coach name is followed by a short identifier, which helps distinguish profiles without making the whole path opaque.

Part A - Requests and caching

A3 - One request, closely

The homepage document uses GET https://coacheey.com/ and returns 200 OK with Content-Type text/html; charset=utf-8. A separate Network overview shows 131 requests, 337 kB transferred and 7.2 MB of resources, with No throttling and caching enabled. These sizes differ because transferred data is not the same as the full size of the resources available to the page. The Fetch/XHR screenshot also shows a successful GET to /rest/v1/public_coach_profiles. This suggests that the browser requests coach data separately from the page document. Its full request query was not copied. [A3]

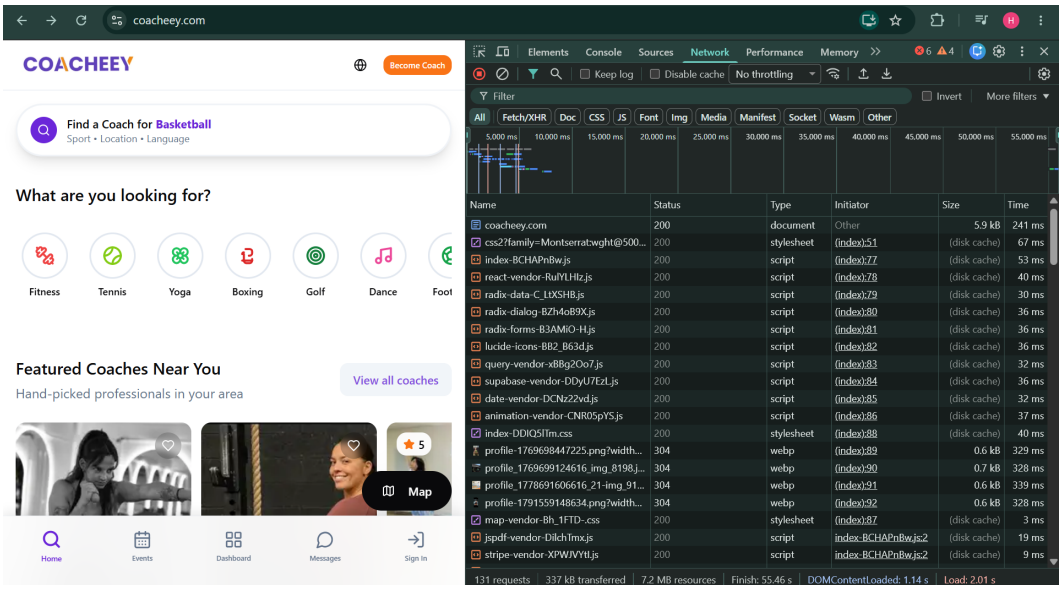

Figure 1. Homepage Network overview. Totals belong to this capture; the separate headers and Fetch/XHR images supply the request details.

A4 - A missing page

The made-up address https://coacheey.com/no-such-page-123 shows "404", "Oops! Page not found" and a "Return to Home" link. However, the document returns 200 even when Disable cache is checked. This is a soft 404: the page says it is missing, but the response code says the request succeeded. The home link helps a visitor recover. Returning an actual 404 would also let search engines and broken-link tools recognise the missing page correctly. [A4]

A5 - Cache-Control

The HTML document uses no-cache, while the inspected JavaScript asset can stay fresh in a cache for one year. The table explains the two policies. This allows the browser to check whether the HTML has changed while reusing an unchanged script. The full script address was not captured in the notes, so the evidence supports the header reading without identifying that resource completely. [A5]

Resource	Recorded Cache-Control	Meaning
Homepage HTML	no-cache	Storage is allowed, but the stored response must be validated before reuse.
Inspected JavaScript asset	public, max-age=31536000, immutable	Browser/shared caches may keep it fresh for one year without routine freshness revalidation; changed content should use a different asset URL.

Part A - Rendering and page metadata

A6 - Where the page is built

The raw source already includes "Find Your Perfect Coach in Luxembourg", a paragraph and links. The live Elements view instead shows "Find Your Perfect Coach" with different surrounding markup. This supports a mixed classification: useful content arrives in the initial HTML, and the browser then changes the page. These screenshots cannot show whether the initial HTML was generated for that request or prepared earlier. JavaScript files alone would not be enough to call the page browser-rendered. [A6]

A7 - SEO basics

The title and description explain the service and its location. The canonical link identifies the preferred homepage address, and lang=en identifies English as the page language. The live heading search finds one h1. The source and live titles differ, but the reason is unknown. The inspected page has no anchors matching sponsored or ugc; whether either attribute was needed was not established, so this is not reported as a fault. [A7]

Item	Recorded value or result
Source title	Find Your Sport Coach in Luxembourg - 50+ Sports | Coacheey
Live title	Sport Coaches in Luxembourg | Find Your Perfect Trainer
Meta description	Find certified sport coaches in Luxembourg. Tennis, yoga, fitness, boxing & 50+ sports. Book online from EUR20/session.
Canonical	https://coacheey.com/
html lang	en
h1	One live match: Find Your Perfect Coach. The count screenshot is cropped.
sponsored / ugc	No matching anchors in the inspected DOM; applicability remains unconfirmed.

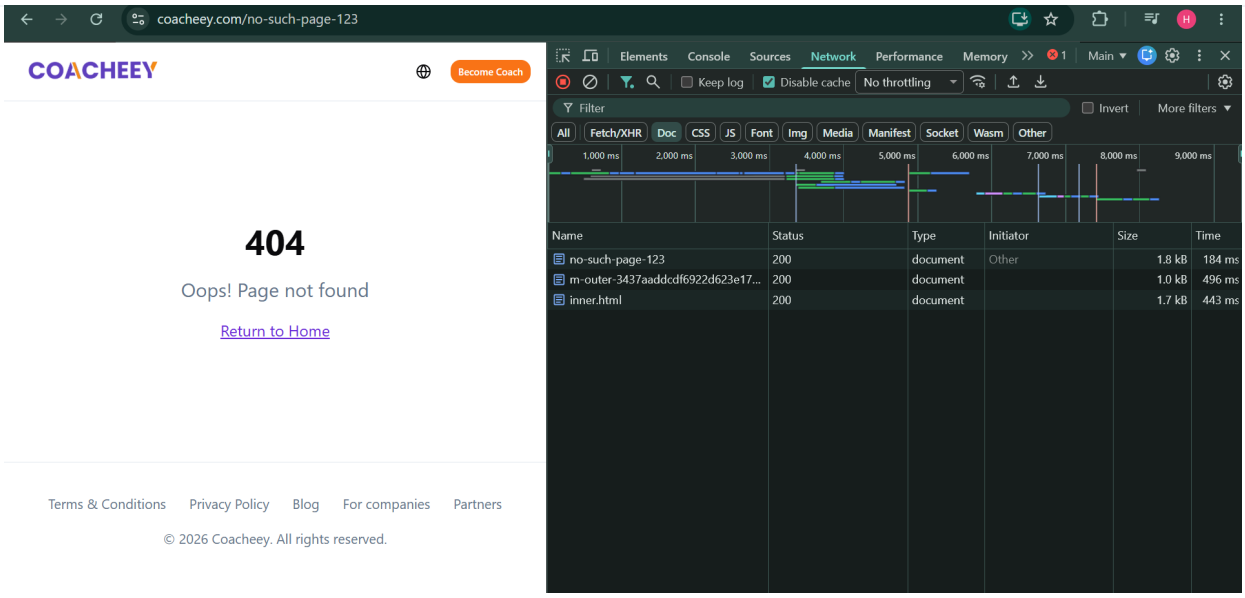

Figure 2. Coacheey's friendly missing-page interface beside the fresh HTTP 200 response. The distinction between visible message and protocol status is the A4 finding.

Part B - Waiting and recovery

B1 - Loading state

The MEC Movement profile first shows placeholders for the picture, avatar and text, then displays the coach's details. The student confirmed that both screenshots came from the same reload. The selected preset is labelled 3G, rather than Slow 3G; caching is enabled and the document returns 304. The placeholders give a useful indication that content is loading. No elapsed screenshot times were recorded, so this pair shows the loading stages but cannot establish how long a visitor waited. [B1]

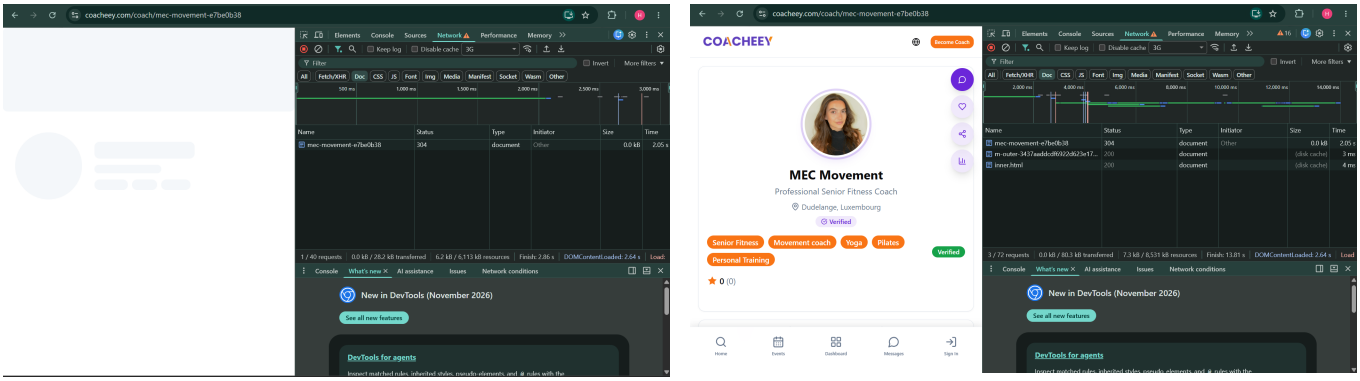

Figure 3. The same profile during loading and after content appears. Original captures are retained; the interval between them is unknown.

B2 - Empty state

Searching Events for zzzqqq shows "0 events found", "No events found" and "Try adjusting your search criteria or location filter." The visitor gets both an explanation and a next step. However, "$62 avg", "Most popular: Fitness" and "4 top-rated" remain visible. It is unclear whether these figures refer to all events or the current results, which could confuse someone seeing zero matches. This screenshot does not establish that the calculations themselves are wrong. [B2]

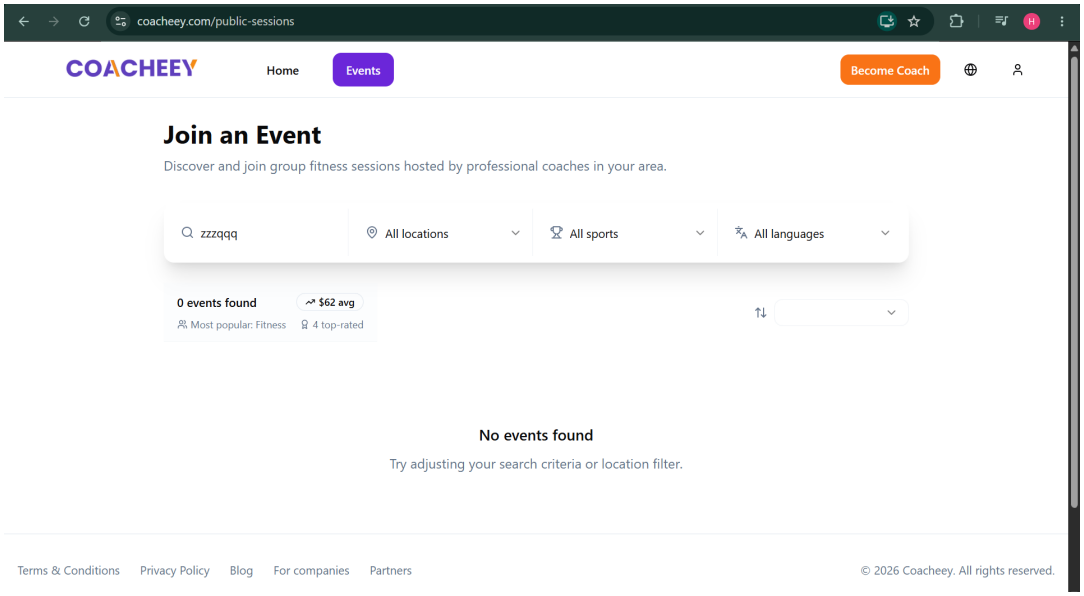

Figure 4. The impossible query returns a clear empty state, but summary statistics remain visible.

B3 - Error state

Reloading Events with Network set to Offline shows Chrome's ERR_INTERNET_DISCONNECTED page and failed or cancelled document requests. The advice is supplied by Chrome, not Coacheey, and this result contains no site-specific retry button. This tests a full-page reload; it does not show how an already loaded search handles losing its connection. Later screenshots show that online activity resumed, but the exact step used to restore the connection was not recorded. [B3]

Part B - Controls and accessibility

B4 - Form validation

Events search was used for the public field checks. No form was identified where an incomplete submission was known to block sending; account and booking actions were excluded. Validation is **not tested safely**, so error wording, placement and input retention remain unknown. This is a review limitation. [B4]

B5 - Field labels

The Events textbox gets its name from a placeholder, with no separate visible label. Location, sport and language have empty computed names: their selected values do not name the field's purpose. The language screenshot is a supporting crop. The header globe is correctly named "Change language". Sort remains unverified. [B5]

Field	Visible label	Accessible name	Label click-to-focus	Finding
Search	Placeholder only	Search sessions...	N/A: no separate label shown	Named, but no persistent visible label
Location	No separate label shown	Empty; value All locations	N/A: no separate label shown	Purpose name missing
Sport	No separate label shown	Empty; value Pilates	N/A: no separate label shown	Value does not identify purpose
Language	No separate label shown	Empty in inspection detail	N/A: no separate label shown	Crop relies on inspection context
Sort	No text in overview	Unverified	Not tested	Appearance alone does not establish a missing name

B6 - Keyboard-only task

Tab and Enter reached Events with visible focus and no trap. The reported header order was logo, Home, Events, Become Coach; no skip link appeared. Tab skipped the sport shortcuts under "What are you looking for?", while a mouse click on Yoga opened results. Header navigation worked, but those shortcuts were unavailable in the same way. Their HTML and alternative routes were not inspected. [B6]

B7 - Lighthouse Accessibility

The homepage scores 94 and Events 93. Both exports use Accessibility-only desktop settings with screen emulation disabled. Audit times are 2026-11-09 11:15:54.972 UTC and 11:42:54.478 UTC; the Events export differs from its earlier screenshot run. The three distinct warnings are low contrast and no main landmark on both pages, plus heading order on Events. These suggest reading/navigation barriers. A high score does not replace manual checks or prove full accessibility. [B7]

B8 - Link and button wording

"Read more" relies on its event card to explain the destination. Adding event context would help. The three filters also need purpose names independent of their selected values. The table suggests wording for these four controls; other icons are not called unnamed without evidence. [B8; B5]

Control/context	Current text or name	Proposed wording	Evidence
Events card	Read more	Read about this Pilates event	B2/B5 overview; preserve association with the event title
Location filter	All locations; computed name empty	Filter by location	B5-location-accessibility.png
Sport filter	Pilates; computed name empty	Filter by sport	B5-sport-accessibility.png
Language filter	All languages; computed name empty	Filter by session language	B5-language-accessibility-detail.png; cropped supporting evidence

Part C - Priorities for improvement

What works well

Helpful empty-search feedback. Events explains that nothing matched and suggests changing the search criteria. This helps the visitor decide what to try next. [B2]

Useful loading placeholders. Coach profiles show the shape of the content before the details arrive. This gives feedback during the wait, although it does not prove that loading is fast. [B1]

Reason for this order: finding a session is the main visitor task, readable text is needed throughout that task, and the missing-page response mainly affects search engines and tools checking broken links.

1 - Make discovery controls identifiable and keyboard-operable

Problem: three filters have no accessible purpose name, and Tab skipped sport shortcuts that worked with a mouse. **Evidence:** the B5 control inspections and B6 keyboard task. **Who it affects:** visitors using a keyboard or assistive technology to find sessions. **Fix:** add visible labels connected to the filters and use controls that work with both mouse and keyboard for the sport shortcuts. **Effort: medium**, because the controls need checking in different states. **Impact: high**, because they are part of the main search task. **Check:** every filter announces its purpose and selected value, and Tab then Enter opens the Yoga results. [B5; B6]

2 - Improve text/background contrast

Problem: Lighthouse flags low contrast on the home and Events pages. **Evidence:** the two original B7 reports. **Who it affects:** people with low vision or anyone reading in bright light. **Fix:** find the flagged text and adjust its foreground or background colour, including hover and focus states. **Effort: medium**, because shared styles and several states need checking. **Impact: high**, because visitors need to read the information before choosing a session. **Check:** the affected colour combinations pass the same contrast check on both pages and remain readable during a manual review. These effort and impact ratings are estimates. [B7]

3 - Make missing-page status agree with its message

Problem: the missing-page screen returns 200 instead of 404. **Evidence:** the fresh A4 capture with caching disabled. **Who it affects:** visitors following broken links, and services that check or index those links. **Fix:** keep the friendly message and home link, but return 404 for an unknown address. **Effort: medium**, because the hosting and routing setup is unknown. **Impact: medium**, because accurate responses help identify broken links. **Check:** the made-up address returns 404 with caching disabled and the home link still works. The benchmark shows why Coacheey should keep its recovery screen while correcting the status. [A4; S1/A4]

Limits of this review

The screenshots do not supply most capture timestamps, the loading pair has no measured interval, validation was not tested, and the sort control remains unverified. The study identifies specific behaviours; it does not establish business impact, complete accessibility or whole-site conformance. Git history and submission tasks are recorded separately in REVIEW-AND-FILL.md.

Appendix - Evidence log

One row per retained evidence file. Unknown screenshot capture times have not been reconstructed from filesystem dates or server headers. HTML audit fetchTime values are separately identified. Cropped details rely on associated full-page evidence and the student inspection account.

ID	File	What it shows	Time and date	Page address
A1	evidence/A1-certificate.png	Chrome certificate/security details for Coacheey; browser reports a valid certificate.	Not recorded / unconfirmed	https://coacheey.com/
A1	evidence/A1-redirect.png	Coacheey destination after the student entered the HTTP address; HTTPS destination reported.	Not recorded / unconfirmed	https://coacheey.com/
A2	evidence/A2-01-events.png	Events page and visible path	Not recorded / unconfirmed	coacheey.com/public-sessions
A2	evidence/A2-02-filtered-coaches.png	Filtered coaches URL containing two UUID-based query values; page still shows loading placeholders	Not recorded / unconfirmed	coacheey.com/coaches?city=d3e88837-bff6-444e-8ba8-13906ae37e0b&sport=37644da5-c4da-46f2-883a-84da3c98e1c4
A2	evidence/A2-03-auth.png	Public sign-in page URL; no login action established	Not recorded / unconfirmed	coacheey.com/auth
A2	evidence/A2-04-coach-profile.png	Coach profile URL with readable name and short identifier	Not recorded / unconfirmed	coacheey.com/coach/bee-mindful-3b6ad569
A2	evidence/A2-05-for-coaches.png	For-coaches landing page URL	Not recorded / unconfirmed	coacheey.com/for-coaches
A3	evidence/A3-document-headers.png	Homepage document headers: GET; 200 OK; text/html; charset=utf-8.	Not recorded / unconfirmed	https://coacheey.com/
A3	evidence/A3-fetch.png	Fetch/XHR inspection: GET to /rest/v1/public_coach_profiles returns 200; full query not transcribed.	Not recorded / unconfirmed	https://coacheey.com/
A3	evidence/A3-network-summary.png	Homepage Network summary: 131 requests; 337 kB transferred; 7.2 MB resources; cache enabled; No throttling.	Not recorded / unconfirmed	https://coacheey.com/
A4	evidence/A4-status-fresh.png	Disable cache checked; nonexistent document returns 200 while the page displays 404	Not recorded / unconfirmed	https://coacheey.com/no-such-page-123
A5	evidence/A5-cache-asset.png	Inspected script Cache-Control: public, max-age=31536000, immutable; complete asset URL unrecorded.	Not recorded / unconfirmed	https://coacheey.com/
A5	evidence/A5-cache-document.png	Homepage HTML Cache-Control: no-cache.	Not recorded / unconfirmed	https://coacheey.com/
A6	evidence/A6-elements.png	Live hero h1 and markup differ from raw source; comparison supports mixed initial HTML and browser updates.	Not recorded / unconfirmed	https://coacheey.com/
A6	evidence/A6-source.png	Raw source includes substantive heading, paragraph and links.	Not recorded / unconfirmed	https://coacheey.com/
A7	evidence/A7-elements-metadata.png	Live title, description, canonical and html lang in Elements.	Not recorded / unconfirmed	https://coacheey.com/
A7	evidence/A7-h1-count.png	XPath //h1 finds one heading. Browser address bar cropped; baseURI shown.	Not recorded / unconfirmed	https://coacheey.com/
A7	evidence/A7-link-attributes.png	Elements search finds no anchors with sponsored or ugc rel tokens; applicability not established.	Not recorded / unconfirmed	https://coacheey.com/
A7	evidence/A7-source-metadata.png	Raw source shows title, description, canonical homepage address and html lang=en.	Not recorded / unconfirmed	https://coacheey.com/ (view-source)

ID	File	What it shows	Time and date	Page address
B1	evidence/B1-mec-loaded.png	MEC Movement profile populated; same reload confirmed by student; elapsed time unrecorded. Displayed rating 0 (0), with no displayed reviews.	Not recorded / unconfirmed	coacheey.com/coach/mec-movement-e7be0b38
B1	evidence/B1-mec-loading.png	MEC Movement profile skeletons; 3G; caching enabled; document 304. Student confirmed same reload as populated capture; elapsed time unrecorded.	Not recorded / unconfirmed	coacheey.com/coach/mec-movement-e7be0b38
B2	evidence/B2-empty-state.png	search zzzqqq; 0 events found; "No events found" and "Try adjusting your search criteria or location filter." Price/popularity/rating summary remains visible.	Not recorded / unconfirmed	https://coacheey.com/public-sessions
B3	evidence/B3-offline.png	Offline reload produces Chrome ERR_INTERNET_DISCONNECTED, with failed/cancelled document requests; browser recovery advice.	Not recorded / unconfirmed	coacheey.com/public-sessions
B5	evidence/B5-language-accessibility-detail.png	Cropped combobox detail with empty accessible name; student identifies Events language filter. Pair with full-page control overview; address/context absent in crop.	Not recorded / unconfirmed	https://coacheey.com/public-sessions (identified by student inspection context, not visible in crop)
B5	evidence/B5-location-accessibility.png	Location combobox: computed Name empty; Value All locations; no associated label specified.	Not recorded / unconfirmed	coacheey.com/public-sessions
B5	evidence/B5-search-accessibility.png	Search textbox: Name Search sessions... comes from its placeholder; no separate associated label specified.	Not recorded / unconfirmed	coacheey.com/public-sessions
B5	evidence/B5-search-controls.png	Events search and location/sport/language controls; no separate visible labels; sort appears blank but its name is unverified.	Not recorded / unconfirmed	coacheey.com/public-sessions
B5	evidence/B5-sport-accessibility.png	Accessibility inspection of sport filter: Role combobox; computed Name empty; Value Pilates; aria-label, aria-labelledby, From label and title Not specified. Focusable true. Value is distinct from accessible name.	Not recorded / unconfirmed	coacheey.com/public-sessions
B7	evidence/B7-lighthouse-home.html	Original student-exported Lighthouse HTML (source Downloads/coacheey); homepage accessibility 94; desktop formFactor, screen emulation disabled, Accessibility only.	Audit fetchTime: 2026-11-09T11:15:54.972Z (UTC; not screenshot capture time)	https://coacheey.com/
B7	evidence/B7-lighthouse-home.png	Student screenshot of homepage score 94; visible flags: insufficient foreground/background contrast and no main landmark.	Not recorded / unconfirmed	https://coacheey.com/
B7	evidence/B7-lighthouse-inner.html	Original Events export: Accessibility 93; desktop; screen emulation disabled; contrast, heading-order and main-landmark flags. Separate run from screenshot.	Audit fetchTime: 2026-11-09T11:42:54.478Z (UTC; not screenshot capture time)	https://coacheey.com/public-sessions
B7	evidence/B7-lighthouse-inner.png	Events Accessibility score 93 with contrast and heading-order warnings; displayed run time 1:10:08 PM; screenshot date unrecorded.	Not recorded / unconfirmed	https://coacheey.com/public-sessions
S1/A1	evidence/S1-A1-eversports-certificate.png	Eversports listing screenshot: Chrome Connection is secure and Certificate is valid. Student separately reports HTTP entry returned to HTTPS; redirect chain not captured.	Not recorded / unconfirmed	https://eversports.fr/dcl/fitness/luxembourg
S1/A4	evidence/S1-A4-eversports-missing-page.png	Chrome-provided missing-page screen: This www.eversports.fr page cannot be found; HTTP ERROR 404; Reload button, no site home link visible.	Not recorded / unconfirmed	https://www.eversports.fr/no-such-page-123

ID	File	What it shows	Time and date	Page address
S1/A4	evidence/S1-A4-eversports-status.png	Headers: GET https://www.eversports.fr/no-such-page-123 returns 404 Not Found. Disable cache checked; Network 3G selected. Browser error page visible above.	Not recorded / unconfirmed	https://www.eversports.fr/no-such-page-123
S1/A6	evidence/S1-A6-eversports-elements.png	Live Elements shows the same h1 text as the source and a main landmark; heading role is level 1.	Not recorded / unconfirmed	https://www.eversports.fr/ (scheme/hostname presentation shortened in browser)
S1/A6	evidence/S1-A6-eversports-source.png	Raw source includes the main sports-booking heading and supporting paragraph; initial HTML has meaningful content.	Not recorded / unconfirmed	https://www.eversports.fr/ (view-source)
S1/A7	evidence/S1-A7-eversports-description.png	Elements meta description describes France-wide sports discovery; og:title is also visible. Use the paired title detail for the document title.	Not recorded / unconfirmed	https://www.eversports.fr/
S1/A7	evidence/S1-A7-eversports-title-detail.png	Cropped Elements detail: actual title Eversports - France - Your click to sport. Supporting detail lacks address bar; page identity relies on associated full-page capture and student inspection context.	Not recorded / unconfirmed	https://www.eversports.fr/ (inspection context, not visible in crop)
S1/B7	evidence/S1-B7-eversports-home.html	Original homepage export: Accessibility 100; desktop; screen emulation disabled; label-content-name mismatch still fails; IndexedDB run warning.	Audit fetchTime: 2026-11-09T22:25:01.133Z (UTC; not screenshot capture time)	https://www.eversports.fr/
S1/B7	evidence/S1-B7-eversports-home.png	Student screenshot: homepage Accessibility 100 and IndexedDB warning. Not a Luxembourg listing audit. Screenshot capture time not established by the audit timestamp.	Not recorded / unconfirmed	https://www.eversports.fr/
